SUMMARY

Versatile Full-Stack Developer with a proven record of building scalable applications using Python and React. I specialize in end-to-end GenAI solutions, complex RAG architectures, and LangGraph-powered AI agents. I excel at mastering new technologies to solve intricate enterprise workflow challenges and deliver robust, production-ready systems.

EDUCATION

Master of Technology in Nanoscience and Technology | Jadavpur University | Kolkata, West Bengal | September, 2024 | CGPA: 6.45

Bachelor of Technology in Electrical Engineering | Siliguri Institute of Technology | Siliguri, West Bengal | July, 2021 | CGPA: 8.35

SKILLS

- **Generative AI:** Langgraph, Agents, LangChain, RAG Architecture, LLMs, Prompt Engineering
- **Programming Languages:** Python, JavaScript
- **Frameworks & Libraries:** React JS, Node.js, Express
- **Databases:** MySQL, MongoDB
- **Tools:** Git, GitHub Copilot, MySQL Workbench

EXPERIENCE

Project Engineer | Wipro | Bengaluru | Sept 2024 – Present

- **AI & Agentic Systems:** Engineered multi-stage automation workflows and agentic solutions using Python and modern orchestration frameworks.
- **Intelligent Pipelines:** Designed end-to-end data processing for unstructured text, audio, and visual media to generate structured insights.
- **Scalable Architecture:** Developed high-availability backends and robust server-side applications with a focus on enterprise-grade security.
- **Full-Stack & UX:** Built responsive React.js interfaces to drive user engagement and operational efficiency.
- **Data & RAG:** Architected RAG systems using SQL, NoSQL, and vector databases (FAISS, Chroma DB) to optimize AI accuracy and retrieval.

PROJECTS

SOP Generator 2.0

- **Description:** Designed and implemented a multi-modal application that automates the creation of structured Standard Operating Procedures (SOPs). The system utilizes agentic workflows to synthesize information from video, audio, PDFs, and images into high-quality documentation.
- **Technologies Used:** Python, Azure OpenAI, LangGraph, React.js, SQLite.

DoConnect Project

- **Description:** Developed an interactive Q&A platform for users, incorporating a real-time chat feature to enhance user interaction and connectivity. Implemented administrator functionalities for content moderation, ensuring platform quality and relevance.
- **Technologies Used:** MongoDB Atlas, React.js (front-end), Express.js (back-end).
