

PRASANJIT SARKAR

Bengaluru, India | 8637594114 | sprasanjit2023@gmail.com | linkedin.com/in/prasanjit-sarkar | github.com/Prasanjit137

Professional Summary

Full-Stack Developer approaching 2 years of experience building scalable applications, with a specialized focus on **LangGraph**-based agentic workflows, **LLM orchestration**, and **RAG** pipelines. Skilled in building **Power BI** dashboards and data models that transform complex requirements into secure, enterprise-ready AI and analytics solutions.

Technical Skills

- GenAI & LLMs:** LangGraph, AI Agents, LangChain, RAG Architecture, Prompt Engineering, Azure OpenAI
- Data Analytics & BI:** Power BI (Desktop & Service), DAX, Power Query (M), Paginated Reports, Data Cleansing, Multi-source Integration
- Data Engineering & Databases:** Data Modeling, ETL & Data Transformation, Row-Level Security (RLS), Vector DB (FAISS), SQL Server, MySQL, MongoDB
- Full-Stack Development:** Python (Flask, Pandas), JavaScript (React.js, Node.js, Express), Docker, REST APIs
- Tools & Methodologies:** SharePoint Integration, Git/GitHub, Docker

Professional Experience

Project Engineer

Sept 2024 – Present

Wipro, Bengaluru

Technologies Used: LangGraph, RAG, Azure OpenAI, FAISS, Power BI, DAX, Python, React.js

- Built multi-stage automation workflows using **LangGraph**, implementing cyclical reflection loops to handle complex, non-linear business logic and improve agent autonomy.
- Developed advanced **RAG** pipelines with **FAISS** vector databases, achieving over 95% retrieval accuracy for high-stakes, client-facing enterprise applications.
- Created data extraction pipelines to convert unstructured audio, video, and PDF sources into structured formats for seamless integration with downstream GenAI models.
- Led development of responsive **React.js** frontends and scalable **Node.js** backends, delivering high-performance AI user interfaces with sub-second latency.
- Contributed to internal GenAI centers of excellence by writing modular, reusable **Python** libraries and technical documentation to drive cross-team adoption.
- Built enterprise Power BI dashboards connected to SharePoint, consolidating financial KPIs and internal training metrics to replace manual tracking with automated, real-time insights.
- Engineered interactive visual components that provide automated performance summaries and highlight critical operational anomalies for executive stakeholders.
- Configured robust **Power Query (M)** pipelines to ingest, clean, and transform data from multiple sources into reliable, audit-ready datasets.
- Translated complex business KPIs into technical requirements, independently owning the full project lifecycle from initial gathering to deployment and maintenance.

Projects

SOP Generator 2.0

Python, Azure OpenAI, LangGraph, React.js, SQLite

- Built a multi-modal ingestion pipeline that transcribes audio/video and extracts text from PDFs or documents, feeding a LangGraph based multi-actor workflow (Extractor, Verifier, Writer, Reviewer) that iteratively refines drafts to reduce hallucinations. The system streams generated SOPs to a React frontend via a Flask orchestrator, cutting manual drafting time from 8 hours to under 1 hour while improving logical consistency by over 30%.

Enterprise Financial & Training Analytics Suite

Power BI, DAX, Power Query, Power Automate

- Developed live Power BI dashboards with advanced DAX models and automated Power Query pipelines to track financial KPIs and analyze internal training metrics, integrating Power Automate to replace a manual reporting workflow.

DoConnect Project

MongoDB, Express, React, Node

- Built a real-time Q&A platform using MERN with JWT authentication, flexible MongoDB schemas, and admin moderation tools, cutting query resolution time by 60%.

Education

M.Tech, Nanoscience and Technology

Jadavpur University, Kolkata, West Bengal

Sept 2024

CGPA: 6.45

B.Tech, Electrical Engineering

Siliguri Institute of Technology, Siliguri, West Bengal

Jul 2021

CGPA: 8.35

Certifications

- LangGraph – Develop LLM Powered AI Agents with LangGraph (Udemy)
- AI Agents: Automation & Business with LangChain & LLM Apps (Udemy)
- Basic to Advanced: Retrieval-Augmented Generation (RAG) (Udemy)
- LangChain – Develop AI Agents with LangChain & LangGraph (Udemy)
- ChatGPT & Prompt Engineering Masterclass (Udemy)
